

The Bridal Kit

The travelling kit, the touch-up kit, and sanitation standards for a whole bridal party

Learning Objectives

- Assemble a complete travelling bridal kit including full backups
- Assemble a touch-up kit sized correctly for a full bridal party
- Apply sanitation standards suited to on-location, multi-client work
- Explain the "two of everything" rule and why bridal work demands it

The kit that cannot fail on the one day it must not fail

A missing product on a normal service day means rescheduling. A missing product on a wedding morning, with no shop nearby and no possibility of a next appointment, means genuine crisis. This module trains a kit built around that single, irreversible reality.

- **The core kit.** Full product range across foundation depth and undertone, complete brush and applicator set, hot tools, pin and clip stock, and portable lighting for venues with poor lighting.
- **The backup layer.** A spare foundation shade match, spare lash adhesive, a doubled bobby pin and hairpin supply, a backup blow-dryer or styling tool, and a charged power bank — every item with a genuine risk of running out or failing gets a second one.
- **The touch-up kit.** A compact, separate bag containing only what is needed for a mid-ceremony refresh — blotting sheets, the exact lipstick shade used, a travel-size setting spray, and extra bobby pins — sized up for a full bridal party if the booking includes one.

◆ Figure 9.1 · The Two-of-Everything Rule

Primary item

=

Backup, identical

Any item whose failure would stop the service gets a second, identical item — no exceptions on a wedding day.

Sanitation for on-location, multi-face work

Between every face in a bridal party, sanitise brushes with a fast-drying brush cleaner, use single-use disposable mascara wands and lip applicators rather than double-dipping shared products, and decant creams and liquids with a clean spatula rather than a finger. On-location work does not lower the sanitation standard taught across every earlier course — if anything, working outside a controlled studio environment makes it more important to maintain deliberately.

Practical Activity · The Kit Inventory

Build a complete kit inventory checklist across the core kit, the backup layer, and the touch-up kit, flagging every item that follows the two-of-everything rule.
