

The Massage & The Wax — Step by Step

The two complete professional service protocols, and the experience that turns either into an Amber service

Learning Objectives

- Perform a complete full-body massage protocol from setup through finish
- Perform a complete waxing service protocol from consultation through aftercare
- Sequence both services in an order that maximises client comfort and safety
- Check a finished service for even, professional, complete results

The full-body massage sequence

1. **Consultation and intake recap.** Confirm the health screening from Module Three and today's specific goals.
2. **Room and table setup.** Warm the room, prepare oils and linens, and ensure the table is correctly rated and positioned per Module Two.
3. **Draping and positioning.** Position the client comfortably, draping correctly per Module Ten from the outset.
4. **Back and shoulders.** Begin here for most full-body sequences — the area carrying the most common tension, worked with strokes moving toward the nearest lymph clusters per Module One.
5. **Arms and hands.** Continue the same directional principle, working toward the underarm nodes.

6. **Legs and feet.** Work toward the groin's node cluster, adjusting pressure for varicose veins or other contraindications noted in consultation.
7. **Neck and scalp finish.** A calming close to the sequence, checking in on overall pressure one final time.
8. **Close and rehydrate.** Allow the client a quiet moment before rising, recommend water, and offer brief aftercare guidance.

◆ Figure 11.1 · The Massage Sequence

Each area's strokes move toward the nearest lymph cluster, per Module One's directional principle.

The waxing service sequence

1. **Consultation and patch test.** For any new client or new product, patch test per standard safety practice before full service.
2. **Prep the skin.** Cleanse the area and ensure hair length is appropriate for the wax to grip correctly (generally at least 6mm).
3. **Test wax temperature.** On your own wrist, every time, per Module Seven — no exceptions.
4. **Apply and remove.** Apply in the direction of hair growth; remove against it, holding skin taut, at a low angle close to parallel per Module Six.
5. **Check and finish remaining hair.** Address any missed hairs conservatively rather than repeating passes aggressively over already-treated skin.
6. **Soothe and protect.** Apply a calming, fragrance-conscious aftercare product, and advise sun protection per Module Seven.

Sequencing both services together

If both a massage and a waxing service are booked in the same appointment, perform waxing first on skin that has not yet been warmed and oiled by massage — oil residue interferes with wax adhesion, and freshly waxed skin is more sensitive to the pressure a massage that follows would apply.

Practical Activity · The Full Protocol

Perform a complete full-body massage on a partner or model, narrating each step aloud, and separately demonstrate a full waxing sequence on a practice area, from patch test through aftercare. **Photograph both finished results — this becomes part of your capstone portfolio.**
